

Animal & Human Hybrid

Animal & Human Composite

1. Choose a minimum of 2 animal images and 2 human. They must be real animals and real human – no animation. Choose appropriate images.
2. Be sure all of the animal and human pieces fit together in a logical way. If the body is turned left while the head is turned right, it may look unnatural and be hard to place the images.
3. Save the images of your chosen characters in a folder on your computer.
4. In Photoshop CC use the crop, quick selection, magic wand, eraser, move, rotate and resize tools to mesh the 4 images into one.
5. Place your animal human hybrid in or on an object. Example: A man/giraffe/monkey hybrid in a raft or on a skateboard.
6. Place your animal human hybrid in a real environment. Example: A man/giraffe/monkey hybrid in the Sahara or New York City.
7. Save As: LNFI_Hybrid.jpg
8. Submit this assignment in the Photoshop Practice: Animal Human Composite Drop Box on Schoology.
