# Animal Mutation

Animal Mutation

1. Choose a minimum of 3 animal images. They must be real animals – no animation.

2. Be sure all of the animals fit together in a logical way. If the body is turned left while the head is turned right, it may look unnatural and be hard to place the images.

3. Save the images of your chosen characters in a folder on your computer.

4. In Photoshop CC use the crop, magic wand, and move tools to mesh the 3 characters into one.

5. Place your animal into a real but unrealistic environment. Example: It is unlikely (unrealistic) to find a parrot/giraffe/monkey hybrid on Mt. Everest (a real place.)

6. Save this Visual Journal as LNFI_Mutation.jpg

7. Submit this assignment to in the PS Practice: Animal Mutation drop box on Schoology.

Animal Mutation

Example

Minus the baby and plus one animal…I just thought this was funny!
